

SALARIES AND INDEXATION IN LUXEMBOURG

On National indexation on 1 February in Luxembourg: public and private wages closely follow inflation (there were two indexations in a few months). In the European Institutions however, an increasingly proportion of colleagues find themselves below the national minimum wage: it concerns [contract agents](#) or officials of [AST/SC 1](#) grade.

Salary compensation systems specific to each Institution exist (by the way this is not included in the famous 12 measures for [the attractiveness of the Luxembourg site](#)), but for the time being nothing has changed.

What proportion of colleagues below this threshold does one needs before the Luxembourg's attractiveness/cost of living issue is really taken care off? When will a housing allowance finally be put in place?
